Gosha Tcherednitchenko

Product engineer (Full-stack) — London, U.K.
gosha@gosha.net | +44 7958 273997 | https://gosha.net | https://github.com/goshatch

I value product insight and care for the people who use that product over technical dogmatism, and I know when "I don't know, but let me find out" is the best possible answer. 20+ years building software, from founder and first engineering hire to fast-growing scale-ups.

- **Founder:** co-founded A Possible Space, building *Parts*, a live clinical tool used by therapists. Earlier co-founded civic tech startup Local Republic.
- **Zero-to-one:** sole engineer who designed, built and launched the Natural Sitter platform, payments and infrastructure included.
- **Team building:** AQ's first engineering hire; hired and led the engineering team that shipped its client work.

Relevant work experience

2025–present **Artificial Labs** (London, U.K.) Product engineer (contract)

Insurtech platform for specialty and commercial (re)insurance used by brokers, underwriters and insurers; $80bn+ premium processed, CB Insights Insurtech 50.

- Owning a new automated ingestion feature end-to-end, from UI to backend: turns schedules of values, bordereaux and similar data into structured platform data, designed to remove manual data entry.
- Key contributor to a platform-wide UI/UX overhaul across multiple broker and underwriter workflows.
- AI-augmented delivery: Claude Code with MCP integrations pulling context from Linear, Figma, Slack and related PRs into feature work; CodeRabbit for automated review.

STACK: TypeScript, Haskell, Nix.

2025 **ClauseBase BV** (Remote) Full-stack engineer (contract)

Belgian legal-tech company building document drafting and automation software for lawyers; acquired by LawVu (New Zealand) in 2025.

- Built AI workflows that let lawyers revise their documents, improve existing wording and fix issues flagged by the platform's analysis tools.
- Worked on the NLP tooling that detects those issues, plus UI/UX work, in the run-up to the acquisition.

STACK: Clojure, ClojureScript

2021–2025 **Indeed Flex** (London, U.K.) Full-stack engineer (contract)

Indeed's flexible-staffing marketplace connecting workers with temporary shifts. Headcount roughly doubled during my time there.

- Introduced org-wide contract testing (Pact) across 4 teams, replacing slow, flaky end-to-end suites: CI around 40% faster on most runs, and an end to ignoring "probably flaky" test failures.
- Built end-to-end observability with Datadog (API and frontend monitoring, real user monitoring, structured logging): much faster debugging and fixes, plus product data that the business, up to the senior leadership team, used to make decisions.
- Onboarded and mentored junior engineers and new starters, and wrote high-quality documentation for internal tooling.

STACK: Ruby on Rails, TypeScript, React, Datadog, Pact.

2019–2020 **Natural Sitter** (Remote) Tech lead (contract)

Pet-sitting marketplace for the Tokyo area. As the sole engineer on a 3-person team, designed, built and launched the platform and its infrastructure: CI/CD, payments, etc.

STACK: Ruby on Rails, Stimulus/Hotwire

2016–2017 **Moneytree K.K.** (Tokyo, Japan) Software engineer (contract)

Personal finance app. Moved the mobile web app from legacy Angular to React.
STACK: Angular, React, Ruby on Rails

2013–2016 **AQ** (Tokyo, Japan) Technical director, THEN Software engineer (contract)

Leading Tokyo product design studio. As AQ's first engineering hire, hired and led an engineering team that shipped client work from prototypes to full-scale web apps, and mentored client teams.
STACK: Ruby on Rails, Angular, TypeScript

2011–2013 **COOKPAD Inc.** (Tokyo, Japan) UI Engineer

Japan's largest recipe platform. Helped bring a mobile-first web UI to one of the world's largest Rails apps, serving millions of users daily.
STACK: HTML/CSS, JavaScript, Ruby on Rails

2005–2010 **Earlier:** Intego (2005–2008, Mac security software; C, Objective-C), Yoorz (2008–2010, design agency; ActionScript, PHP)

Ventures

2024–present **A Possible Space** (London, U.K.) Co-founder

Two-person studio building software for mental health professionals. Built and launched *Parts*, a live mapping tool for Internal Family Systems therapists: a visual canvas of a client's parts and their relationships, history across sessions, clinical notes and PDF export.
STACK: Clojure, ClojureScript

2010–2011 **Local Republic** (Berlin, Germany) Co-founder

Civic tech and community action platform: residents photographed local issues (e.g. potholes) and we filed the paperwork with city hall for them, alongside local discussion of problems and solutions. Led UI/UX design, development and customer success.
STACK: HTML/CSS, JavaScript, Ruby on Rails

Education

2019 **Royal College of Art**, M.A. Photography

2010 **Keio School of Media Design × P2PU**, Digital Journalism

2005 **EPITECH**, M.Sc. Information Technology

Skills

Main	Ruby/Rails (15+ years), TypeScript (10+ years), Haskell (daily since 2025), Clojure/ClojureScript (2+ years)
Also	Common Lisp, C, Zig, Nix. Happy to pick up new skills and technologies.
AI	Agentic engineering: Claude Code, MCP integrations, local models, CodeRabbit

Fluent English, French, Russian. Conversational Japanese, basic Mandarin Chinese and Spanish.
